Mark Scheme

2010 Examination - June Series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

Marking Guidance for Examiners GCSE Science Papers

1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the Examiner make his or her judgement and help to delineate
 what is acceptable or not worthy of credit or, in discursive answers, to give an overview
 of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example:

where consequential marking needs to be considered in a calculation;

or the answer may be on the diagram or at a different place on the script.

In general the right hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Emboldening

- 2.1 In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following lines is a potential mark.
- 2.2 A bold **and** is used to indicate that both parts of the answer are required to award the mark.
- **2.3** Alternative answers acceptable for a mark are indicated by the use of **or**. (Different terms in the mark scheme are shown by a /; eg allow smooth / free movement.)

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	4,8	0
2	green, 5	0
3	red*, 5	1
4	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Pluto, Mars, Moon	1
2	Pluto, Sun, Mars, Moon	0

3.2 Use of chemical symbols / formulae

If a candidate writes a chemical symbol / formula instead of a required chemical name, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

3.3 Marking procedure for calculations

Full marks can be given for a correct numerical answer, as shown in the column 'answers', without any working shown.

However if the answer is incorrect, mark(s) can be gained by correct substitution / working and this is shown in the 'extra information' column;

3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

3.5 Errors carried forward

Any error in the answers to a structured question should be penalised once only.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

3.6 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.7 Brackets

(....) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

3.8 Unexpected Correct Answers not in the Mark Scheme

The Examiner should use the ? area in the CMI+ software to forward such answers to a Senior Examiner.

Question 1

question	answers	extra information	mark
1 (a)	conduction		1
1 (b)(i)	any one from:		1
	starting temperature (of cold water)	temperature is insufficient	
	pipe lengthpipe diameter	accept size of pipe	
	 pipe (wall) thickness volume of cold water temperature of hot water (in) time 	accept amount for volume	
1 (b)(ii)	(type of) material is categoric	accept one variable is categoric	1
		accept variable(s) are categoric	
		accept it is categoric	
		accept variable(s) are not continuous	
		descriptions of variables ie names and numbers is insufficient	
1 (b)(iii)	copper		1
	greatest temperature change	only scores if copper chosen	1
		accept heat for temperature	
		accept heated water the fastest	
		accept it was hottest (after 10 minutes)	
		accept it is the best / a good conductor	

Question 1 continues on the next page . . .

Question 1 continued . . .

question	answers	extra information	mark
1 (c)	larger (surface) area	accept the pipe is longer	1
		accept hot (dirty) water (inside pipe) is in contact with the cold water (outside pipe) for a longer time	
		the pipe is a spiral is insufficient	
Total			6

Question 2

question	answers	extra information	mark
2 (a)	gamma will pass through the body or alpha will not pass through the body	it refers to gamma answers must relate to the body accept skin for body	1
	gamma is only slightly ionising or alpha is heavily ionising	accept gamma causes less damage to cells / tissue do not accept gamma causes no damage to cells	1
		less harmful is insufficient	
2 (b)(i)	(both graphs show an initial) increase in count-rate	accept both show an increase	1
2 (b)(ii)	only the right kidney is working correctly		1
	any two from:	if incorrect box chosen maximum of 1 mark can be awarded	2
		reference to named kidney can be inferred from the tick box	
	count-rate / level / line for right kidney decreases (rapidly)	it decreases is insufficient	
	count-rate / level / line for <u>left</u> kidney does not change	it does not change is insufficient	
	radiation is being passed out / into urine - if referring to right kidney		
	radiation is not being passed out - if referring to the left kidney		

Question 2 continues on the next page . . .

Question 2 continued . . .

question	answers	extra information	mark
2 (c)(i)	time taken for number of nuclei to halve or time taken for the count-rate to halve		1
2 (c)(ii)	short half-life - the level of radiation (in the body) decreases rapidly to a safe / very small level	it refers to short life isotope	1
	a long half-life - the radiation remains in the body / for a long time		
	level of radiation remains high	answers in terms of damage eg cancer are insufficient	
Total			9

Question 3

question	answers	extra information	mark
3 (a)(i)	2.1	correct answer only	1
3 (a)(ii)	3.15 or their (a)(i) × 1.5 correctly calculated	allow 1 mark for correct substitution ie 2.1 × 1.5 or their (a)(i) × 1.5	2
	kilowatt-hour	or a substitution 2100 × 5400 scores 1 mark 2100 × 5400 incorrectly calculated with answer in joules scores 2 marks an answer of 11 340 000 scores 2 marks an answer of 11 340 000 J scores 3 marks	1
3 (a)(iii)	most (input) energy is usefully transformed	accept does not waste a lot of energy accept most of the output / energy is useful do not accept it does not waste energy	1

Question 3 continues on the next page . . .

PHY1H Question 3 continued . . .

question	answers	extra information	mark
3 (b)	the room is losing energy / heat		1
	at the same rate as the heater supplies it	this mark only scores if the first is scored do not accept heater reaches	1
		same temperature as room / surroundings	
		rate of heat gain = rate of heat loss scores both marks	
Total			7

Question 4

question	answers	extra information	mark
4(a)(i)	answers any two from: travel at the same speed (through a vacuum) can travel through a vacuum / space transfer energy can be reflected can be refracted can be diffracted can be absorbed can be transmitted transverse	accept travel at the speed of light accept air for vacuum do not accept air for vacuum accept any other property common to electromagnetic waves accept travel at the same speed through a vacuum for both marks do not accept both radiated from	2 2
		the Sun	
4 (a)(ii)	infra red	both required for the mark	1
	radio(waves)	accept IR for infra red	

Question 4 continues on the next page . . .

PHY1H

Question 4 continued . . .

question	answers	extra information	mark
4 (b)	2400000000	correct transformation and substitution gains 1 mark ie 300000000 or 300000000 0.125 12.5 an answer of 24000000 gains	2
	hertz	1 mark either 2400 000 kHz or 2400 MHz scores 3 marks but the symbol only scores the 3 rd mark if it is correct in every detail accept Hz	1
	TIOTIZ.	do not accept hz	'
4 (c)(i)	presented (scientific) evidence / data	do an experiment / investigation is insufficient	1
4 (c)(ii)	to find out if there is a hazard (or not)	accept to find out if it is safe accept not enough evidence to make a decision not enough evidence is insufficient	1
Total			8

Question 5

question	answers	extra information	mark
5 (a)(i)	tidal / tides	do not accept water / waves	1
5 (a)(ii)	any three from:		3
	shorter journey time	accept easier to go from town to town accept less petrol / fuel used	
	less pollution from traffic	accept CO ₂ / carbon emissions reduced	
	energy source is freeenergy source / tides are predictable		
	 produces less / no pollutant gases (than fuel burning power stations) 	accept no CO ₂ / greenhouse gases produced accept air pollution for pollutant gases	
	 conserves supplies of fossil fuels uses renewable energy (to generate electricity) provides employment no visual / noise pollution 		
		less harm to the environment is insufficient	
		the electricity is cheaper is insufficient	
		do not accept produces no radioactive waste	
		the pollution mark scores twice only if it is clear one reference is to traffic and the other is to electricity generation	

Question 5 continues on the next page . . .

Question 5 continued . . .

question	answers	extra information	mark
5 (b)(i)	(sometimes) electricity demand may be greater than supply (of electricity from the system) or can sell (excess) electricity (to the National Grid)	accept in case turbines / generators fail	1
5 (b)(ii)	decreases the current	accept increases the voltage	1
	reducing energy loss (along cables)	accept less heat / thermal energy lost / produced	1
Total			7

Question 6

question	answers	extra information	mark
6 (a)	wavelength (of light appears to) increase	accept frequency (appears to) decrease	1
		accept light moves to the red end of the spectrum	
		do not accept it moves to the red end of the spectrum	
		do not accept light becomes redder	
6 (b)(i)	M is closer (to the Earth) than N		1
	M is moving (away from the Earth) slower than N		1
6 (b)(ii)	520	an answer between 510 and 530 inclusive gains 1 mark	2
6 (b)(iii)	more recent	no mark for this but must be given to gain reason mark	
	data more reliable	accept data is more accurate	1
	improved equipment / techniques or	more technology is insufficient	
	data obtained from more (distant) galaxies	accept a wider range of data	
		accept data closer to the line of best fit	
		or data less scattered	
		accept no anomalous result(s)	
		accept all data fits the pattern	
6 (c)	wavelength is decreased		1
	frequency is increased		1
Total			8
